

For the sake of commerce, we traverse the globe

We're proud to say that our food trade company is among the most rapidly expanding in the industry. Our business involves global trade both in and out of the country. Our ability to anticipate market shifts, capitalise on emerging possibilities, and provide exceptional service across all industries has been the bedrock of our success.

We provide food and drink of the highest quality and have trademarked our brand. In order to ensure that our clients have access to all of the food and drink products they need at prices that are both affordable and do not skimp on quality, we work hard to source only the best products and services on the market and make them available to them. We supply the Middle Eastern markets with both exported and imported food items. We have earned a solid track record of success because to our dedication to providing excellent service and dependable goods.

The key to our success has been mastering the science of delivering precisely what our clients need, when they need it. The efforts of our hardworking staff have allowed us to grow and diversify our business to include not just the food industry but also retail, packaging, catering, and other fields. Every day, we work hard to improve the quality of our products from a sanitary and microbiological aspect so that we can give back to the neighbourhoods where we live and work.

It is our goal to provide our clients with high-quality services at reasonable prices. Retailers, wholesalers, grocery dealers, caterers, restaurants, hotels, ship chandlers, etc. make up the bulk of our customer base. We're always open to trying new things to better serve our customers.

The company is led by a group of young, highly-qualified professionals with experience working in a dynamic and continuously changing industry.

We deal in agricultural products on a global scale as a supplier, distributor, wholesaler, importer, and exporter. We are involved in the domestic and international trade of a wide range of agricultural products, including fresh fruits (including pomegranates, mangoes, fresh mix fruits, kiwis, apples, pears, and dragon fruits), fresh vegetables (including onions, potatoes, garlic, fresh green chilli, okra, fresh paper, and fresh mix vegetables), rice (both Basmati and non-Basmati) and wheat (both whole and flour).

Our products' clean and user-friendly packaging alternatives help us maintain their nutritional value and show our appreciation for our clients' patronage. We only work with the most cost-effective and quality-focused farmers, vendors, and suppliers.

Our customers are located all over the world, from the Middle East to the Far East to South East Asia and the United States, therefore we have to be able to accommodate their needs through a simple but strategic integrated shipment procedure.

Giving You More

More than powering your business today, we are fuelling your ambitions for tomorrow. We're here to help whether you're looking for commercial fuel solutions to keep operations smooth, products consistent, or shipments on schedule.

CLAPS OILTECH is an affiliated re-seller of petroleum products that focuses on providing high-quality fuel supply, fuel delivery, and fuel management solutions to businesses of all kinds. We are committed to providing cutting-edge services, procedures, and technologies to our customers in order to help them maximise their fuel economy.

This year's groundbreaking change to petroleum regulations has created new possibilities for protocol-driven, safe, and legally permissible diesel door delivery. Technology-enabled solutions with automated systems guarantee real-time information and tracking, resulting in significant savings of 10–20% for the consumer, accounting controls that are simple and convenient, and the connection of Retailers with more and more customers. On a broader scale, it has provided new opportunities to lessen our impact on the environment by cutting down on things like pollution and traffic.

Fuels of the highest quality

Service centred on the customer's relationships

A solid, well-planned supply network

Commercial fueling experience and expertise

Than Just fuel

We pledge to always serve our customers with the highest quality service, and to work hard to cultivate mutually beneficial partnerships with our suppliers so that we can count on a constant and consistent supply for our many customers. Heavy industries and the mining sector rely on fuel, gas, and lubricants for their energy needs, and CLAPS OILTECH PRIVATE LIMITED is here to help them switch to a cleaner, cheaper option. By providing an alternative energy source that is in line with the Kyoto Protocol on global greenhouse gas emission, of which India is a signatory, we support and ensure solid sustainable economic investment.

We benchmark to be India's top exporters, importers, and distributors of imported coal. We are the most in-demand imported coal suppliers in the country because we offer a wide selection of kinds sourced from dependable international suppliers that boast improved generation capacity, higher calorific value, and more stringent quality controls. Here are the various types of imported coal we stock

Indonesia - We are an Indonesian steam coal provider, and our coal comes from some of the most reputable coal mines in Indonesia. It is only with us that you will find such low costs on this particular type of coal, which has found widespread use in a number of different manufacturing sectors.

Russian Coal: We are one of the most well-known providers and importers of Russian Coal in the country due to our ability to provide premium coal at market-competitive costs. Because of its high carbon content, efficient heating capacity, and low moisture, this coal finds use in a variety of industries.

We primarily trade steam coal, coking coal, Manganese and iron ore in order to meet Asian demand for raw materials. We also trade base metals, sponge iron, and ferroalloys.

In order to add value for our business partners, our team, which is present across many different international geographies, possesses deep expertise in international sourcing across a number of origins, including South Africa, Australia, Indonesia, the USA, Russia, and Brazil; marketing and distribution across markets, including retail deliveries; shipping and logistics; and financing.

We strive to rise to a position of comparable significance in Asia and are currently among the top private trade houses in India.

We obtain base metals and ferroalloys from the most reputable mines worldwide, allowing our suppliers access to markets all over the world. In order to guarantee a high level of client satisfaction, we have direct relationships with both producers and end users. We also make use of our advantages in logistical assistance, affordable financing, risk management, quality assurance, and prompt delivery.

CLAPS OILTECH PRIVATE LIMITED was incorporated in 2021. We're a trading-and-exploring community. When everyone succeeds, the team is stronger. CLAPS offers a wide range of products and services, including global representation, local wholesale and distribution of commodities, and petroleum product distribution in India. We have a solid foundation in commodity trading and petroleum, making us global powerhouses in both. Our global network serves INDIA and the MIDDLE EAST. We're an Indian-owned company that serves the UAE, Sri Lanka, Bangladesh, China, and Middle East.

Environmental and economic benefits encourage biodiesel production. CLAPS OILTECH wants to contribute to technological breakthroughs and monitor business model development from the start of biodiesel production in India. More information on biodiesel production and triple bottom line benefits will be available as the sector matures. Consumers are more likely to support a fuel source that helps their neighbourhood and has strong ties to nearby companies. Sustainable biodiesel aims to be environmentally, economically, and socially beneficial.

CLAPS SIMPLY VEGG works with our network of Asian offices to expand agricultural exports to Asia, the Middle East, and the EU. With a growing population and middle class, food output will increase. We're seeking fresh food investment opportunities and credible alliance partners throughout Oceania. Our company trades sugar, spices like dry red chillies, turmeric, coriander, and cumin seeds; food grains like rice, wheat, corn, sorghum, and tea; pulses; and agricultural feed like soyabean meal and rice bran de-oiled cake. We export lentils, faba beans, black Matpe, and toor to India. Canada, Australia, and Burma are our top importers. We trade sugar, corn, and dal business-to-business. We stock supplies for manufacturers, exporters, and other institutions. We safeguard the product's integrity and original flavour by complying to industry packaging standards.

Biodiesel, an alternative fuel that is both commercially available and easy to produce at home, is a fascinating and rapidly developing industry. From a technological perspective, we may answer the question in two ways. Biodiesel is an alternative diesel fuel made from renewable resources such as vegetable oils, recycled grease, and animal fats. Biodiesel's chemical name is "Fatty Acid Alkyl Esters." Diesel-powered cars, trucks, tractors, boats, irrigation systems, mining equipment, electricity generators, and virtually any other application can run on biodiesel or a biodiesel blend.

On the current market, CLAPS OILTECH functions as both a distributor of biodiesel fuel oil and a producer of such fuel. In terms of both their quality and their level of purity, these are unparalleled. In addition, we offer a price range that is among the most affordable on the market for such a comprehensive selection of products.

Environmental Benefits of Biodiesel

- **Renewable fuel generating 60% lower GHG emissions than HSD**
- **Reduces emissions of CO₂, smog-causing particulate matter, and harmful carcinogens**
- **Greatly reduces the carbon footprint, especially if produced from waste**
- **Less flammable than petroleum diesel – safer to handle and store**
- **10 times lower toxicity than table salt, with biodegradability equivalent to sugar**
- **Safer to use in ecologically sensitive areas**

Buying, Selling, and Marketing Biofuels

We're working to grow internationally in all aspects of the biodiesel, renewable diesel, and biofuel feedstock supply chain: sourcing, transport, storage, trading, and distribution. We develop biofuel energy solutions to address the rising global demand for low carbon transportation fuels, and our extensive controlled rail car and terminal network helps us do so. Our fuel programmes improve the bottom lines of retailers, wholesalers, traders, and refineries while also making our global economy more resilient for the next generation.

"Coming together is a starting point
Togetherness leads to development
Collective effort always yields the best results"
